# GROUND-COVER 

 $\sim$ Plants

Rock-Garden Plants and Herbaceous Perennials Trees, Shrubs and Evergreens

## HUGH B. BARCLAY

NARBERTH, PENNA.

## About Our Plants and Methods

FOR many years, Ground-Cover Plants, like Pachysandra, Sedums, Veronica, and the like, have been among our chief nursery productions. Our experi-ments- and reports from our customers- prove that our well-grown, wellrooted plants give a close, compact growth that will cover the ground to the exclusion of weeds and take the place of grass. While grass is good and beautiful, it is many times best to use low-growing, compact plants, the foliage or bloom of which is attractive, and which will succeed in accomplishing a definite purpose.

In particular, some of the varied uses for Ground-Cover Plants would be: Under trees as a benefit to the trees and to cover the raw soil beneath them; under evergreen and shrub plantings for the same purpose and to face down, as we call it, the planting, so that the bare stems of the shrubs are hidden by foliage; for terraces, slopes, garden borders and walks, stepping-stone paths, foundation plantings, base of entrance gates, and the like. In fact, once one becomes interested in the possibilities of such plants, myriad occasions arise for their use.

It is better to use many smaII, well-grown plants, rather than fewer large plants, for a given area. With larger plants, widely spaced, cach plant must grow a great deal to completely cover the space between plants, while smaller ones, closely spaced, have each to grow but little before a solid carpet is formed, which excludes the sun from their root-system, conserves moisture, and eliminates weeds.

Our economical system of propagation and method of selling the stock as fieldgrown plants or directly from $21 / 4$-inch pots, in which they are allowed to remain until fully pot-bound, instead of re-shifting into $31 / 2$ or 4 -inch pots, eliminates the expense of re-shifting; no excess soil is shipped, packing charges are lessened, and plants ship more safely and are better and more quickly planted. Dollar for dollar value, the closely spaced smaller plants will give much better results than larger plants more widely spaced.

Complaints. We have carefully investigated the complaints received, and can truthfully say that poor results of such plantings are invariably due to careless planting and careless preparation of the soil. Please read planting directions carefully.

## Plants for Landscapes and Gardens

If you have gardens and home-grounds, you should be interested in the extensive collection of Hardy Perennials, Ferns, Evergreens, Flowering Shrubs and Trees presented in this Catalog. We believe the collection will meet the needs of every planting, large or small, and we are sure that the prices will be attractive to the most exacting buyer.

## PACKING AND SHIPPING

Prices arc quoted net F.O.B., Narberth, Pa. No eharges arc made for packing and boxing. As plants arc perishable, it is our custom to ship by Express, unless otherwise speeified. Small orders are forwarded by Pareel Post, for which add 10 per cent of your remittance.

## QUALITY

Only strong, first-elass plants are shipped. Hundreds of testimonial letters in our files bear out this statement.

## TERMS

If cash aeeompanies order, 2 per cent may be deducted. Charge aecounts may be opened upon reeeipt of the names of three parties with whom the customer has had eredit relations, or by sending bank or trade referenees. Suffieient time must be allowed for investigation.

## RATES

Speeial quotations made for plants in quantity.
Less than 5 plants add 5 cts . each to 10 rate; 25 plants at the 100 rate; 250 at the 1000 rate

## Using Ground-Cover Plants to Bind and Beautify Terraces

Because many planters fail to visualize the beauty of the color of foliage contrasts of Ground-Cover Plants, especially on banks and terraces, we have shown here a plan of a 100 by 24 -foot terrace so planted. The size, quantity, distance to plant, and different varicties of plants used, are given, and the key number showing where they are to go in the planting.

From the Ground-Cover Plants listed in this Catalog, many combination plantings can be used to give foliage and flower effect in spring, summer, fall, and winter.

On steep terraces partially shaded by large trecs, or on open sunny terraces too steep or difficult to mow, combination ground-cover plantings are excellent, require little attention, always look well, and the labor of upkeep is reduced to practically nothing.

Where the slope of the land has necessitated making an abrupt terrace, it becomes a necessary evil
 detracting from the harmony which would otherwise exist. Here Ground-Cover Plants can be arranged to soften the contour and convert the terrace into a gradual slopc. These simple diagrams illustrate this idca.

On stcep terraces and slopes with northern exposure not every pant wan thrive. There are many excellent plants in the Ground-Cover Plant list which will do very well in such a location. They introduce warmth of foliage in winter and a cool green in summer.

For large terraces we are glad to submit estimates. Make a small diagram or ground-plan of the terrace, showing length and width, the sunny and shady places, the exposure - whether north or south, and the likeand stating the degrec of slope. From this information we can give you quite an aceurate estimate on quantitics to use, cstimating either for a combination planting similar to the above plan, or where desired, with only one varicty of ground-cover.

## Helpful Planting Hints

Heavy Soils. Few plants enjoy heavy soil, even if rich; for such soils we advise the addition of 2 inches of sand and 2 inches of Peat Moss, dug into the soil not more than 4 to 6 inches deep. If soil is rich, no manure need be added. Plant firmly.

Medium Soils. Add 1 inch of sand and 2 inches of Granulated Peat Moss, or fine compost, dug 4 to 6 inches deep (not deeper). No manure unless soil is poor. Plant firmly.

Light Soils. Add 2 inches of Granulated Peat Moss or leaf-mold or compost, Peat Moss preferred. Add manure if soil is poor, but do not dig under more than 6 inches, except for Euonymus or similar decp-rooted plants. Plant firmly.

Very Poor Light Soils. Add manure and Peat Moss (or compost), 2 inches of each. Dig in deeper, about 8 inches, level and add 1 inch more of Peat Moss. Dig lightly and plant firmly.

Hard Ground. Where clay subsoil has been mixed with the top-soil at time of grading, the entire mass should be broken by deep digging. Then add 2 inches of sand, 2 inches of Peat Moss or manure, and turn it again. Now add another inch of sand and Peat Moss and dig 4 to 6 inches deep.

Under Trees. Any plant under a large tree has keen competition; usually the soil is poor and contains little
humus. We advise digging the soil to a depth of 8 inches; add 3 inches of manure and 2 inches of Peat Moss or compost; add sand if the soil is heavy. Dig well again, add an inch of Peat Moss or compost and work in lightly.
Plant firmly, and water the plants well so the roots and soil come in close contact, resulting in immediate growth. A half-inch mulch of Peat Moss, buckwheat hulls, or compost is beneficial immediately after planting.

## Peat Moss

Pcat Moss is semi-decayed noss, light brown in color, free from fungus and weed sceds, and has no odor. Its value lics in its power to absorb nearly sixteen times its weight of moisture and to make friable heavy clay soils, as well as to make light soils capable of retaining moisture. We advise the use of Peat Moss for large plantings of Ground-Cover Plants in other than good garden loams. Bales are sold by cubic contents, not wcight. Each bale contains sufficient Pcat Moss to cover 240 squarc feet of surface 1 inch deep. In planting Rhododendrons, Azaleas, Kalmias, and other broad-leaved plants, we can safely say that a mixture of 50 per cent top-soil and Peat Moss will grow any of these plants to perfection.

Prices will be quoted on request

Pachysandra Beneath Norway Maple on Front Lawn

## Pachysandra Terminalis

(JAPANESE SPURGE)

## The Green Rug for the Outdoor Living-Room

"Use Pachysandra" has become a popular saying and thought with many landscape architects and plantsmen when confronted with the problem of planting situations such as follows:
Bare areas under dense shade.
Bare ground under evergreen plantings.
Bare ground under shrub plantings.
Bare areas along shady driveways.

> Bare areas in courtyards.

Bare arcas in city yards.
Bare areas at entrance gateways.
It stands out, not as a substitute for some other plant, but as the best and only one to use for these situations.

Pachysandra recommends itself-evergreen winter and summer; hardy under all conditions; disease-frec; even height of 6 inches; does not flop in winter.

Distinctly bencfits shade trees, evergreen and shrub plantings, not alone in providing the natural mulch or forest condition of top-soil so important to them, but also in bringing out and adding an effect of completeness. The finished appearance that Pachysandra gives to plantings is unquestioned. It will carry out natural lines, face down and relieve foundation plantings, rhododendron borders, azalea plantings, cxtend the planted rock-garden from sun to shade in a naturalistic manner, enhance woodland gardens, combine with and protect plantings of spring bulbs. There are few plants as satisfactory as Pachysandra, and none that surpass it.

## Endorsements

In ease we seem to elaim too mueh honor for Paehysandra, let us refer you to some of our elients who have used many thousands. Ameriea is our market, and we ship annuatly greater and less quantities to almost every state, including California, Texas, and Florida. Clients in Canada, Hawaii, Cuba, and England commend and praise this plant of a thousand uses.

#### Abstract

These extracts from letters in our files come from renowned landscape architects and arborists. "I am of the opinion that Pachysandra is of immense bencfit as a ground-cover under old trees, and I know of numerous occasions where it has been so used in the vicinity of Boston." "I ams strong for the planting of Pachysandra and other ground-covers about the base of old trecs." "It seems to mc that the bencficial effect of Pachysandra on many trees would be almost a foregone conclusion." "I am of the opinion that Pachysandra under trecs on the lawn, where it is impossible to mantain a good turf, not only prevents erosion, but maintains the moisture and is a decided benefit for both trees and shrubbery." "In addition to its attractive appearance we find it a great aid in maintaining certain conditions and

highly recommend its use in the restoration and preservation of old and undernourished trees."
"After applying top-soil, peat moss, and manure, it is my intention to blanket these arcats with Pachysandra, which 1 consider the most effective ground-cover obtainable."
"My own experience has been that there is no better way of keeping a soil condition conducive to a good root-growth than by means of such a groundcover."
"We have been using Pachysandra for a number of years and find it a very desirablc ground-cover for use under trecs."
"I am very much in favor of using the groundcovers wherever possible in place of grass."
"Briefly, I believe that its greatest value is that of continuing or reproducing forest conditions for old trces."

## Pachysandra is Beneficial to Aged and Undernourished Trees

For this reason alone it deserves highest recognition. Nationally known tree surgeon eompanics, who are aeeomplishing invaluable service in prescrving the large and old trees of the eountry, reeognize Paehysandra as the best means of rccreating the natural forest conditions laeking on well-kept lawns or bare grounds from whieh the leaves are blown or earefully raked away. They have written us that they instruet their men in its use and strongly recommend it because it proteets the roots of large trees from the drying effeet of sun and wind, prevents surfaee transpiration, and collcets the fallen leaves, enabling the tidy applieation of humus and fertilizer. The cool, green foliage, 6 inehes high, hides the leaves or humus, keeps the soil cool, while the stoloniferous root-system keeps the soil friable and permits falling moisture to easily penetrate to the tree roots.

## Size of Pachysandra to Use

Our plants are not divisions. They arc grown from cuttings and have a strong, undivided rootsystem. Pachysandra is a true evergreen and "requires the shadc of its own foliage" for best results; therefore it should be "planted closely," using young, vigorous plants in preference to large plants widely spaced. One-year field-plants, twoyear freld-plants, or $21 / 4$-inch pot-plants are the proper sizes to usc.

All sizes may be safcly planted at any season. For cxtensive plantings we recommend the use of two-year field-plants, planted half and half with one-year field-plants. For all general plantings twoycar field-size are most satisfactory, and for summer plantings the $21 / 4$-inch pot-plants should be used.

An effective rock-garden planting that can readily be made on suburban home-grounds

## Plants Needed for Ground-Covers, Borders, Cutting-Gardens, and Rock-Gardens

For the conveniencc of customers and friends, these various plants are arranged in one section of this booklet. As a further convenience, the Ground-Cover Plants are indicated by the character (star), and Rock-Garden Plants by the symbol © (diamond).

Ground-Cover Plants need little attention, as nature seems to have given them an unusual ability to care for themsclves. As a result, they have a multitude of uses. Many of them are useful in rock-gardens, quickly filling open spaces that otherwise would be unsightly. Further notes about Ground-Cover Plants will bc found on page 2 .

Rock-Garden Plants. The delights of a well-planned and properly constructed rock-garden amply repay one for the Iabor and cost involved, particularly because it gives opportunity to posscss and admire many unfamiliar and beautiful flower gems, not at all at home in other locations.

Select as a proper site a sloping bank or terrace, preferably with south and west exposurc, as most rockplants are sunshine plants. As irregularity of contour is most of the charm of the garden, make this irregularity in the soil before placing the rocks; otherwise, try as you may, a flat, unintercsting surface will be the result. The stone selected should be hard Iimestonc, preferably, or any large and natural field-, waterworn, or moss-covered rocks or boulders, not quarricd, and should be selceted from one locality, if possible, so that the general color of the rocks is alike. They should be placed in a natural irregular formation, by no means regularly spaced like so many spots on a design of wallpaper, and very firmly lodged in the soil. A good rule is to bury at least half the stone.

For general purposes, prepare the soil by the addition of well-rotted manure and Peat Moss, and if hcavy clay soil, add considcrable sand, this preparation to be made before placing the rocks. Many plants require special soil-conditions, of course, but that is too lengthy a subject to discuss here

In the pockets of irregular size and form between the stones, plant the flowers you have selected, using a number of one kind together, because most of the Rock-Garden Plants are more effective in masses.

Low shrubs, vines, and evergreens - Laurel, Daphne, Azaleas, English Ivy, Prostrate Junipers, Vinca minor, and the like will relieve the harshness of the rocks and form backgrounds for the flowering plants as well as increase the irregularity of the planting.

The list of plants herewith includes such as are most positive to succed without special soil and culture. If onc has time and intense love for such gardening, many more and bcautiful plants are available.

We shall be glad to afford you the benefit of our experience in selecting plants or outlining more explicitly the procedure of making a rock-garden.

## General List of Plants

ACHILLEA Ageratum. Sweet Yarrow. 3 to 4 in. © Europe. Foliage light shining green, forming evergreen rosettes from whieh arise slightly leafy, 1-foot stems bearing good bright yellow flower elusters from June to August. Perfeetly hardy. Suitable for low masses, roekery, and roadsides Field-plants
. $\$ 2$ for $10 ; \$ 15$ per 100
A. filipendulina. Fernleaf Yarrow. 3 ft . Orient. A sturdy plant with fernlike foliage almost to the bright yellow, dense heads of flowers. June to September. A fine plant for large masses. Field-plants. .
. $\$ 1.50$ for $10 ; \$ 12$ per 100
A. Millefolium roseum. Rosy Milfoil. Garden - varicty of the eommon Yarrow, not quite so sturdy in growth. Foliage very finely eut, fernlike, mainly about the base of the plant, deep green. Flower-stems about 15 inehes high, bearing a profusion of rosy pink flowers in flat heads during June and in less numbers throughout the summer. Suitable for massing, rockery, and roadsides.

FieId-plants.
$\$ 1.50$ for $10 ; \$ 12$ per 100 $21 / 4$-in. pot-plants . . . . . $\$ 1.25$ for $10 ; \$ 10$ per 100
A. Ptarmica, Boule de Neige. Sneezewort. An * improved, double-flowered garden variety. Leaves - smaIl, dark green and undivided, mainly disposed about the base of the plant, forming a mat about 3 inches high from whieh the flower-stems rise to about 15 inehes. The pure white, double flowers are borne in open clusters during June, July, and oceasionally later. A good eut-flower. Suited for low masses, bank-planting, and roekery. Any soil. Endures shade, but needs sun for flowers. Field-plants
$\$ 1.50$ for $10 ; \$ 12$ per 100
A. sericea. From Lebanon. Rather new to garden * lists. Foliage gray and silky, eut but not finely - divided, disposed mainly as a mat about 6 inches high from whieh the flowering stems aseend 15 to 18 inehes. Flowers bright yellow, in dense heads from May to September. Perfeetly hardy and easy of eultivation. Good cut-flower. Suited to masses, bank-planting, and rockery.
Field-plants.
$\$ 2$ for $10 ; \$ 12$ per 100
A. tomentosa. Woolly Yarrow. Southern Europe.

* Foliage finely divided, more or less woolly, green,
© forming attraetive mats about 2 inehes high, Bright yellow heads of flowers on about 6 -ineh stems during June and in less numbers later. Suited for low masses, roekery, and roadsides.

For 10 Per 100 Per 1000
Field-plants.

Ajuga reptans

Aconitum Napellus
ACONITUM Fischeri. Azure Monkshood. North Ameriea, Asia. Attraetive, large, three-parted and eut foliage borne mainly on the 2 to 4 -foot stems whieh terminate in a paniele of odd-shaped, large blue flowers during September. Give deep, rieh soil. They enjoy some shade, but not dry soil. Suited for rear of perennial borders, in broad-leaved evergreen plantings and woodland borders. Poisonous to eat.
Field-plants.
$\$ 2$ for $10 ; \$ 15$ per 100
A. Napellus, Spark's Variety. Aeonite. Foliage divided and eleft into linear Iobes and borne on stiff stems 3 to 4 feet high. Flowers deep blue, in a terminal spike during July and August. Culture and uses similar to the preceding speeies. Field-plants
$\$ 3$ for $10 ; \$ 25$ per 100
ETHIONEMA persicum. Persian Stonceress. 9 in. - Iberis-like plants, dwarf, shrubby. Flowers showy, in terminal racemes, deep rose. Open soil and sun.
Field-plants.
$\$ 2$ for $10 ; \$ 18$ per 100
AGROSTEMMA Coronaria. See Lychnis, page 23.
AJUGA genevensis. Similar to $A$. reptans except

* that the flowers are bright blue, in June, and are earried on stems 6 to 8 inehes high. The mature foliage takes on a variegated form.

Anchusa myosotidiflora

AKEBIA quinata. See page 42.
ALYSSUM argenteum. Silver Alyssum. Europe. - Foliage smaII, oblong, dark grayish green, silvery underneath, forming open, attractive mats a few inches high. Flowers yellow, in open elusters on stems about a foot high. This species follows $A$. saxatile in flower in late spring, and by removal of the forming seeds will flower more or Iess continuously. Suited for low masses, bank-planting, and rockery.
Field-plants
$\$ 1.50$ for $10 ; \$ 12$ per 100
A. montanum. Europe, Asia. Small gray foliage

- forming mats 2 to 3 inches high. Flowers yellow, in simple spikes during May and June. Fragrant. Roekery.
Field-plants
. $\$ 3$ for $10 ; \$ 25$ per 100
A. saxatile compactum. Goldentuft. 6 in. Europe.
© Foliage grayish, larger than $A$. argenteum, and arranged somewhat in rosettes. The bright yellow flowers are borne on branched stems a few inches above the foliage, in May. Excellent for rockery $\stackrel{\text { or garden border. }}{ }$
Ficld-plants.
. $\$ 2$ for $10 ; \$ 12$ per 100 4-in. pot-plants
$\$ 2.50$ for $10 ; \$ 18$ per 100
A. serpyllifolium. 3 to 4 in . Alps. Leaves small, $1 / 2$ inch or Iess. Light yellow flowers in May and June.
Ficld-plants.
. $\$ 2$ for $10 ; \$ 18$ pcr 100
ANCHUSA Barrelieri. Early Bugloss. Europe, Asia. Much lower than A. italica, with smaIIer foliage. Stems somewhat reclining, about 18 inches high. Flowers dark bluc, oceasionally lighter, May and aII summer. Does weII in semishade. Suited for masses and banks. Field-plants
$\$ 1.50$ for $10 ; \$ 12$ per 100

Anchusa italica, Dropmore. Italian Bugloss. Clusters of large blue flowers on stems about 4 feet high. Will bloom nearly all summer.
Field-plants . . . . . . . . . . . . $\$ 2$ for 10; $\$ 15$ per 100
A. myosotidiflora. Bugloss. 1 ft . Dwarf, heart-

- shaped leaves. Forget-me-not-like flowers in May and June. For borders or rock-garden, sun or shade.
Ficld-plants.
. $\$ 2.50$ for $10 ; \$ 18$ per 100
ANEMONE japonica. Japanese Anemone. Europe. Plants form foliage elumps less than a foot high, from which arise about 2 -foot flowering stems during September and until frosts. Flowers Iarge, 2 to 3 inches across. The plants like a deep, rich soil and will endure some shade. They should be given a mulch during the winter. Woodland and border.
Queen Charlotte. Pink; semi-double.
Field-plants............ $\$ 2$ for $10 ; \$ 18$ per 100
Whirlwind. White; semi-double.
Field-plants........... . $\$ 2$ for $10 ; \$ 18$ per 100
A. Pulsatilla. European Pasque Flower. Europe. - Delicatc-appearing plants with finely divided basal leaves and large, generally purplish flowers on stems about 10 inches high. ApriI. Rockery in mellow, well-drained soil in half-shade.
Field-plants
.$\$ 1.80$ for $10 ; \$ 15$ per 100
ANTHEMIS tinctoria, Kelway's Variety. Camomile. Large, golden yellow flowers, produced aII summer on 2 -foot stems. Excellent for cutting. Grows in poor soil.
Field-plants
.$\$ 1.25$ for $10 ; \$ 10$ per 100
ARABIS alpina. Alpine Rockeress. Europe. 4 to
$\Leftrightarrow 6$ in. Masses of pure white flowers very carly in the spring. Sun, not particular as to soil. ExcelIent for rockery.
Field-plants.
.$\$ 1.50$ for $10 ; \$ 12$ per 100
ARCTOSTAPHYLOS Uva-ursi. Bearberry. One k of the best ground-covers. Thrives equally well in sandy and loamy soils, forming a dense, low mat of evergreen foliage. Fine for covering rocky slopes and banks, sandy places, and seashore plantings. Small white flowers tinged with red followed by large red berries.
3-in. pot-plants
$\$ 3.50$ for $10 ; \$ 30$ per 100

Arenaria montana

Long-spurred Aquilegias naturalized in front of a stone wall

AQUILEGIA alpina. Alpine Columbine. A species - from Switzerland, growing only a foot or less high, with Iarge, rich blue flowers. May and June. $21 / 4-\mathrm{in}$. pot-plants. . . . . $\$ 1.50$ for $10 ; \$ 12$ per 100
A. canadensis. American Columbine. North

- America. The graceful native spccics with red and ycllow flowers during May and June. Endures shade, but cannot abide a heavy leaf-mulch.
Field-plants.
$\$ 1.50$ for $10 ; \$ 12$ per 100
A. chrysantha. Golden Columbine. Southwestern
- United States. A stronger growing species, usually about 2 fect high, with yellow flowers from June to August. Not as shade-cnduring as $A$. canadensis. Garden groups. Ficld-plants.
$\$ 1.50$ for $10 ; \$ 12$ per 100
A., Crimson Star. 15 to 18 in. A new varicty. Spurs and sepals red; white petals. May and June. Field-plants.
$\$ 2.50$ for $10 ; \$ 18$ per 100
A., Farquhar's Pink. $11 / 2 \mathrm{ft}$. A strain of long-spurred hybrid Columbines selected to bright pink shades. May to August. Border.
Ficld-plants............. . . $\$ 2$ for $10 ; \$ 15$ per 100
A. Iucida. $11 / 2$ to 2 ft . New introduction. Dark purple, double flowers in May and June.
Field-plants.
.$\$ 1.50$ for $10 ; \$ 12$ per 100
A., Mrs. Scott Elliott's Hybrids. A strain of Iong-
© spurred hybrids in a large number of colors-reds, blues, whites, and ycllows in various combinations. Blooms from May to August. Our plants are from seed taken from selected labeled flowers and contain a large assortment of colors without a preponderance of any one shade. Somewhat stronger in growth than Farquhar's Pink, reaching $11 / 2$ to 2 fect. Suitable for groups and rockery.
Field-plants. . . . . . . . . . . . $\$ 2$ for 10; $\$ 15$ per 100
A. Skinneri. Scarlet and yellow flowers. Full bloom in May and Junc. Suitable for shady places. Field-plants.
. . $\$ 1.50$ for $10 ; \$ 12$ per 100
ARENARIA balearica. Crecping Sandwort. A
* dense-growing, crecping plant, useful for clothing bare rocks or stoncs near the waterside. If planted on the shady side, in any smaII chink, it rapidly spreads its mosslike foliage and is sprinkled in summer with tiny white starlike flowers. Field-plants............... . $\$ 2$ for $10 ; \$ 15$ per 100

Arenaria montana. Mountain Sandwort. Europc. * Tufts of dark green foliage 3 to 4 inches high. Flowers $\Leftrightarrow$ pure white, large and conspicuous, May to August. Excellent for rockery. Light sun and half shade. $21 / 4$-in. pot-plants ........ . $\$ 2$ for $10 ; \$ 15$ per 100
A. verna cæspitosa. Moss Sandwort. Europe and * Rocky Mountains. Forms dense, mosslike mats of - evergreen foliage. Flowers white, small, not much above the foliage. Not particular as to soil. Shade and half-shade. Fine for rockery or bet ween stepping-stones.
21/4-in. pot-plants
$\$ 2$ for $10 ; \$ 15$ per 100
ARMERIA Laucheana. Thrift. 3 to 6 in. Excellent () rock-plant. Very free flowering; bright rosy pink flowers in May and Junc. Excellent for seashore plantings as it likes dry, sunny situations. Foliage forms dense grasslike cushions.
Field-plants
$\$ 1.25$ for $10 ; \$ 10$ per 100
A. maritima. 3 to 6 in . This makes a good cdging plant. Foliage is grasslike. Flowers pale pink, in Nay and Junc.
Field-plants . . . . . . . . . $\$ 1.50$ for $10 ; \$ 12$ per 100
A. maritima alba. White-flowering form of the preceding.
Field-plants
$\$ 1.50$ for $10 ; \$ 12$ per 100
ARTEMISIA frigida. Fringed Wormwood. Rocky

- Mountains. Foliage very finely cut, of a dark silvery green, forming a mat about 6 inches high, cvergreen. Flower-bearing stems to about 11/2 feet, with similarly colored leaves and yellow flowers. Valuable for its distinct foliage color. Perfectly hardy. Rockery in full sun.
Ficld-plants . . . . . . . . . $\$ 2.50$ for $10 ; \$ 20$ per 100
ASARUM canadense. Wild Ginger. North * America. A shade-loving plant with large, kidneyshaped, deciduous leaves rising about 6 inches from a crecping underground stem, and chocolatecolored flowers near the ground. A satisfactory plant for a ground-cover in rich, shady woods. Good companion for trilliums. Should not receive a heavy leaf-mulch.

For 10 Per 100 Per 1000 Collected plants. . . . . . $\$ 200 \quad \$ 1200 \quad \$ 8500$

[^1] will be found on pages 37 to 39 .

Aster, Mauve Cushion
ASCLEPIAS incarnata. Swamp Milkweed. 3 ft . Native. A branching plant with good glabrous green foliage. Attractive pink flowers in July. Strong, established plants cut down after flowering will bloom again in the fall. Suitable for roadside planting in masses in moist positions in full sun.
Strong, collected plants.... $\$ 2$ for $10 ; \$ 12$ per 100
A. tuberosa. Butterfly-wead. $11 / 2$ to 2 ft . Native. SmaII, dark green foliage. Flowers orange to orange-red, very showy, July and August. Give deep, weII-drained to dry soil in fuII sun. $3-y r$. field-plants. . . . . . $\$ 1.50$ for $10 ; \$ 12$ per 100
ASTER alpinus. Rock Aster. Europe, Asia, North *) America. A dwarf Aster with the foliage in a cluster about the base of the plant and a solitary flower 3 to 4 inches across, borne on a 10 -inch stem. The flowers vary from white to pink and violet. May, June. Easy of cultivation. Field-plants

S2 for $10 ; \$ 15$ per 100
A., Mauve Cushion. Japanese Hardy Aster. A

* distinct species forming circular, cushion-like plants $1 \frac{1}{2}$ feet across and 9 inches high. Flowers delicate soft mauve, over $11 / 4$ inches in diameter, completely cover the plant in October and November. Excellent for steep terrace planting combined with thymcs and Nepeta Mussini.

For 10 Per 100 Per 1000 Field-plants............. $\$ 200$ \$12 00 \$100 00
ASTILBE Davidi. David Astilbe. China. Foliage much like other Astilbes. Flowers pink, on 4 -foot stems. Moist soil with shade from hot sun.

GENTIANA Andrewsi. Closed Gentian. Native.

- Leaf-bearing stems to about 2 feet. Flowers large, showy, purplish blue, clustered in the upper leafaxils during July and August. Likes moist, rich soil in sunlight or semi-shade - not stagnant water. Field-plants.
$\$ 1.50$ for $10 ; \$ 12$ per 100

Funkia subcordata grandiflora

## Ferns

ADIANTUM pedatum. American Maidenhair. Native. A beautiful woodland Fern about a foot high, with dark, polished stems and a flat, open, canopy-like arrangement of leaflets. The leaf-color is a delicate light grcen. This species has creeping roots and if satisfied with conditions spreads well. It likes moist, cool woods and a good yearly covering of leaves. The new stems in spring will force holes through tough oak leaves. A mulch is more important than shade. The soil should be good leaf-mold. Collected clumps.
$\$ 1.50$ for $10 ; \$ 12.50$ per 100; $\$ 100$ per 1000
DENNSTEDTIA (Dicksonia) punctilobula. Hay-scented Fern. Native. A finely cut, deciduous Fern common in masses in woodland and open fields (especially North). It increascs by underground stolons, so that small plants, placed a foot apart, will make a thick mass. A light finc mulch is beneficial. Collected clumps.
.$\$ 1.50$ for $10 ; \$ 12.50$ per 100; $\$ 100$ per 1000
DRYOPTERIS cristata (Aspidium cristatum). Crested Woodfern. Native. An evergreen Fern with glossy light green fronds about 15 inches high. It likes light, moist soil and is suited to dense shade. Collected clumps.
. $\$ 1.50$ for $10 ; \$ 12.50$ per 100; $\$ 100$ per 1000
D. marginalis. Leather Woodfern. Native. An evergreen Fern with a distinct stem and cut fronds somewhat resembling other deciduous woodland Ferns. Grows about $11 / 2$ feet from strong crowns, not crecping. A finc Fern for masses in open woodland or heavier shade. Good garden soil. Collceted clumps.
. $\$ 1.50$ for $10 ; \$ 12.50$ per 100; $\$ 100$ per 1000
OSMUNDA cinnamomea. Cinnamon Fcrn. 2 to 4 ft . Native. A large deciduous Fern, sending up its fronds from a strong crown. Called the Cinnamon Fern from the color of the fruiting stem which rises in the center of the frond group. Likes fairly moist soil. Best of the Osmundas for deep shade. Will grow in full sun and is often planted about homes as specimens, or in small groups. Garden soil. Collected clumps............................................ . $\$ 1.50$ for $10 ; \$ 12.50$ per 100; $\$ 100$ per 1000
O. Claytoniana. Interrupted Fern. Native. Similar to the preceding in growth and appearance, except that the spore-bearing pinnæ, instcad of being located on a scparate stem, are borne on the middle of some of the fronds. The name Interrupted Fcrn comes from this break in the form of the frond. Grows in somewhat drier places than the Cinnamon Fern. Garden soil.
Collected clumps.
.$\$ 1.50$ for $10 ; \$ 12.50$ per 100; $\$ 100$ per 1000
O. regalis. Royal Fern. Native. Taller than the two preceding Osmundas, reaching to 6 feet. Very distinct, with the fronds truly bipinnate, giving the appearance of black locust foliage. It requircs a really moist soil-preferring swamps-and considerablc sunlight. Garden soil. Collected clumps.
.$\$ 1.50$ for $10 ; \$ 12.50$ per 100; $\$ 100$ pcr 1000
POLYPODIUM vulgare. Polypody. Native. A low evergreen Fern, 2 to 6 inches high, with creeping roots, forming mats of foliagc about rocks and on banks wherc falling leaves do not remain to smother. Gencrally found in shaded positions, but grows well in full sun. Suitcd to rockerics in good garden soil. Collected clumps.
$\$ 1.50$ for $10 ; \$ 12.50$ per $100 ; \$ 100$ per 1000
POLYSTICHUM (Aspidium) acrostichoides. Christmas Fern. An evergreen Fern, dark green in color, the fronds of which are collected in quantitics for florists' use. This Fern sends its fronds up from a central crown and docs not increasc by creeping roots, so any planting must be thick enough to accomplish the effect desired. It dislikes the winter sun and, where possible, should be given a northern cxposure. Should not receive a mulch of Icavcs. Grows best in good, fairly heavy garden soil. Fine for shaded banks or woodland ground-cover. A good base for the trillium and other woodland bulbs. Collected clumps. .
.$\$ 1.50$ for $10 ; \$ 12.50$ per 100; $\$ 100$ per 1000
PTERIDIUM aquilinum (Pteris aquilina). Bracken. 2 to 4 ft . Triangular large fronds, spreading out flatly from the top of a slender, tough stem. Root-creeping, easily injurcd in transplanting. Good for open woodland masses, woodland borders, or use in full sun. In rich, Ioose, draincd soil in the open it forms magnificent groups to 5 fect. Collected clumps.
$\$ 1.50$ for $10 ; \$ 12.50$ per $100 ; \$ 100$ per 1000

English Ivy (Hedera Helix) may be used to advantage under spreading branches. This picture shows excellent results

GAULTHERIA procumbens. Aromatic Winter-- green. Native. A low, trailing evergreen with bright green leaves. Flowers white, followed by large bright red berries which remain until next season. Mulch the bed with peat moss. It requires one season to establish this plant.

LYTHRUM Saliearia roseum (L. roseum superbum). Rose Loosestrifc. Native. Grows about 3 feet high, considerably branched and bushy, with willow-like Ieaves, and in July to September is covered with numcrous, showy, rosc-colored flowers. Docs fincly under garden culture, but in the wild is found in moist grounds or even in mud or shallow water, conditions under which few plants thrive. Excellent for about water, masses, naturalizing, and roadside planting.
Field-plants
$\$ 1.50$ for $10 ; \$ 12$ per 100
MAZUS reptans. Hardy. Small Iavender and white * flowers, speckled with gold. Sun, light shade, - carpeting in rock-garden. Good subject.

For 10 Per 100 Per 1000
Ficld-plants. . . . . . . . . . . . $\$ 100$ \$8 00 \$65 00

MERTENSIA virginica. Virginia Blucbells. 1 ft . - Native. Early foliage of an unusual shade of light green, above which arc borne large clusters of blue flowers. It likes rich, open, fairly moist soil, and is found growing wild in woodland, but its flowering scason is praetically over before the tree foliage gives shade. Given satisfactory soil it does well in garden or rockery. The plant has the fault of losing its foliage soon after flowering, so that in the garden it should be planted with some laterappearing companion plant or some ground-cover.

THERMOPSIS caroliniana. Carolina Thermopsis. 2 to 3 ft . Long spikes of bright yellow, peashaped, Iupine-Iike flowers. Very hardy. Good for the border or for the wild and pieturesque garden. Excellent for eutting.
Field-plants
.$\$ 1.50$ for $10 ; \$ 12$ per 100
THYMUS. Thyme. 1 to 3 in . The Thymes are * known and used throughout the world as ground-- cover plants for flagstone terraces and waIks, on dry banks, in rock-gardens. Their foliage is very wiry and fragrant. The small, round leaves when bruised give off a fragrance known as "Thyme." If planted at various points of the garden, or on the lawn itself, their odor is delightfully evident at shadow-time. Always attractive, quick spreading, and casy to grow. Thymc is a "link" with days of "hooped skirts, the sword, and buckler."
T. azoricus. Rose flowers. Dark evergreen foliage.
T. citriodorus aureus. Golden-leaved Lemonseented Thyme.
T. Ianuginosus. Woolly Thyme. Woolly grayish foliage. Bright pink flowers.
T. Serpyllum. Wild Thyme. Native. AImost evergreen. Lilac flowers.
T. Serpyllum albus. White-flowering form.
T. Serpyllum coccineus. Crimson-flowering form.

Pachysandra makes an excellent ground-cover under shrubs and broad-leaved evergreens

## Deciduous Shrubs and Trees

From the first warm days of spring to the bleak days of November, the home-owner delights in the Flowering Shrubs and Shade Trees that surround his home. Without them, home-grounds would be poverty-stricken indeed. Trees and Shrubs are the most inexpensive things that enter into home-furnishings, but it is hard to estimate the value added to the property by a foundation planting, a border or screen, and half-a-dozen Shade Trees.

ABELIA grandiflora. Glossy Abelia. 3 to 4 ft . Dwarf shrub with glossy, nearly evergreen foliage and arbutus-Iike pink flowers from July until frost. Always neat and graceful. Suited for use in flower gardens and as a border shrub in evergreen or deciduous plantings. Each For 10 Per 100 $11 / 2$ to 2 - ft . field-plants... $\$ 065 \quad \$ 550 \quad \$ 4500$ 2 to 3 -ft. field-plants..... $90 \quad 750 \quad 6000$

## Hybrid French Lilacs (Syringa vulgaris)

Marvelous changes have taken place among the Lilaes-or Syringas, as properly known. From the oldfashioned purple and white that grew around eottages and country homes, there have come lovely pinks, soft lavenders, rich reds, and royal purplcs. Lilacs grow readily, need little attention, have no insect enemies of consequence, and usually bloom freely. Mildew, which affeets the foliage of some varieties, is readily controlled by sulphur dust and similar preparations. Our Lilacs are field-grown, well-developed plants that will give entire satisfaction.

3 to 4 ft ., $\$ 2$ each; $\$ 15$ for 10.4 to 5 ft ., $\$ 3$ each; $\$ 27.50$ for 10

## DOUBLE LILACS

Anthony Buchner. Pinkish lavender

## Climbing Vines

Nature uses rich green vines to add beauty to the landscape and cover unsightly places. Wisdom suggests that in planning your home-grounds you follow Nature's lead.
AKEBIA quinata. Five-leaf Akebia. A slender, twining, woody vine to 12 feet or more, with half-evergreen foliage of five small leaflets. Flowers small, purplish, in carly spring, fragrant. The fruit is 3 to 5 inches long, but is seldom produced. A good vine where a light shade is desired. Has the habit of scnding out growths from the base which creep over the ground or over shrubs, and the like, and so is satisfactory as a bank-cover. Drained soil in sun. Good autumn color.
2-yr. ficld-plants. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 25 cts. each; $\$ 2$ for 10; $\$ 15$ per 100
21/4-in. pot-plants
25 cts. cach; $\$ 2$ for $10 ; \$ 15$ per 100
AMPELOPSIS quinquefolia. Virginia Creeper. Woody vine climbing to 30 feet or more by branehed tendrils (not twining). Foliage large, with five leaflets, eoloring various reds in the fall. Flowers greenish, small, in cymes. Fruits bluish black. An excellent native vine for covering trce-trunks or rough surfaces to which it can cling. Makes a beautiful hedge when traincd to a substantial fence. Endures much shade and is one of our woodland ground-covers.
2-yr. field-plants.
30 cts. each; $\$ 2.50$ for $10 ; \$ 18$ per 100
4-in. pot-plants.
50 cts. cach; $\$ 4.50$ for $10 ; \$ 40$ per 100
A. trieuspidata (A. Veitchi). Boston Ivy. The popular closc-clinging vine from Japan reaching 50 feet or more. Foliage attractive, glossy, roundish, 3-lobed, turning brilliant orange and reds in the autumn. Flowers and fruits somewhat similar to the above. The largest and fastest growing wall-cover.
2-yr. field-plants
40 ets. cach; $\$ 3.50$ for $10 ; \$ 25$ pcr 100
4-in. pot-plants
.60 cts. each; $\$ 5$ for $10 ; \$ 40$ per 100
BIGNONIA radicans. Trumpet Crceper. A woody vine to 30 fect or morc, not twining but clinging by rootlets. Foliage pinnate, with 9 to 11 Icaflets about 2 inches long, glossy grcen. Flowers showy, tubular, scarlet with orangc, in terminal racemes from July to Scptember. Can be kept a slirub by yearly pruning. Suited also for use as a rambling shrub-like vine to cover walls, stumps, and the like. Good soil, sunlight. Good autumn color.
2-yr. field-plants. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 20 cts. cach; $\$ 1.50$ for 10; $\$ 10$ per 100
3 -yr. field-plants
25 cts. each; $\$ 2$ for $10 ; \$ 15$ per 100
CELASTRUS scandens. Bittersweet. A native woody twining vine to 20 feet or more, with ovate, glossy grcen leaves turning bright yellow in the fall. Showy, drooping clusters of orange fruits with crimson seeds elinging to the branches all winter. Endures considerable shade. Without support it will remain fairly shrub-like and may be used for massing.
2 -yr. ficld-plants, 2 to 3 ft .
25 cts. cach; $\$ 2$ for $10 ; \$ 15$ per 100
3 -yr. field-plants.
35 cts. each; $\$ 3$ for $10 ; \$ 22$ per 100
CLEMATIS, Large-flowering Hybrids. Vines from 6 to 12 feet, requiring trellis or wire support. Flowers large, 5 to 6 inches across, midsummer until frost. Should be planted in good soil with the crowns about 3 inches below the surface. The plants appear much more thrifty in sections where the soil contains considerable lime and is rather heavy.
Henryi. Purc white. Jackmani. Dcep violet-purple. Edouard Andre. Rich dark crimson.

## The above three Clematis, 2 -yr. field-plants, 75 cts. each; $\$ 6.50$ for $10 ; \$ 60$ per 100

C. paniculata. Swcet Autumn Clematis. A vigorous, fast-growing species to about 12 fect. Foliage dark grcen, plentiful. Flowers fragrant, white, over an inch across, in many paniclcs, making a mass of bloom in September.
3-yr. field-plants . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 25 cts. each; $\$ 2$ for 10; $\$ 18$ per 100
4-in. pot-plants.
35 cts. each; $\$ 3$ for $10 ; \$ 25$ per 100
HYDRANGEA petiolaris. Climbing Hydrangea. This splendid hardy climber is but little known and deserves more extcnsive cultivation. It climbs by rootlets like the English ivy. The foliage is bright green, and numcrous white, flat flower-cymes are produced which average 8 to 10 inches across in June. Use on stone, cement or brick walls. 4-in. pot-plants
\$1 each; \$9 for 10; \$80 pcr 100
LONICERA japoniea Halliana. Japanese Honcysuckle. See page 22.
POLYGONUM Auberti. Silver Lace Vine. An herbaceous climber becoming somewhat woody at base. Strong plants will reach 25 feet in height during the scason's growth. Light grecn foliage, often bronzy, and a profusion of silvery white, smaII flowers in erect spikes, even more beautiful than the popular Clematis paniculata which blooms at about the same time in September. Herbaccous percnnial vines are searce. Useful also for covering banks, etc. Good autumn color. 2-yr. field-plants, strong

60 cts. each; $\$ 5$ for $10 ; \$ 45$ pcr 100
WISTERIA sinensis. Chinese Wistcria. A wcll-known vine, but not often used for its best purposc, that of covering stcep banks and low walls. Such uses of this plant are beautiful and nake the waste places a decided joy. Lavender-purple flowers. Rapid grower. Grafted from flowering plants.

## Plants for Special Purposes

To assist you in selecting plants for special purposes and places, these lists have been prepared. All are mentioned in this Catalog.

Plants growing in light shade are indicated by $L$; in medium shade by $M$; in heavy shade by $H$. Thus you will be able to seleet for various situations. Other plants are suitable for sunny positions.

## Ground-Cover Plants

Ajuga genevensis. H.
Aiuga reptans. H.
Akebia quinata.
Arctostaphylos Uva-ursi.
Arenaria balearica. M.
Arenaria montana. M.
Arenaria verna cæspitosa. M.
Asarum canadense. L.
Aster, Mauve Cushion
Callirhoe involucrata. L.
Calluna vulgaris (all varieties).
Campanula carpatica.
Cerastium tomentosum. L.
Convallaria majalis. H.
Cotoneaster horizontalis. L.
Cotoneaster horizontalis perpusilla.
Cotoneaster humifusa.
Cotoneaster microphylla.
Cotula squalida. M.
Cytisus scoparins.
Daphne Mezereum. M
Dianthus cesius.
Dianthus deltoides. L.
Epigea repens. M.
Erica carnea.
Erica vagans.
Euonymus radicans. LM.
Euonymus radicans acutus. LM.
Euonymus radicans colorata. LM

Euonymus radicans kewensis. LM.
Euonymus radicans variegatus. LM.
Euonymus radicans vegetus. LM.
Ferns.
Adiantum pedatum. LMH.
Dennstixdtia (Dicksonia) punctilobula. LM.
Polypodiam vulgare. MH.
Galax aphylla. MH.
Gaultheria procumbens. MH.
Gypsophila repens
Hedera Helix. LMH
Hedera Helix gracilis. LMH.
Helianthemum (all varieties)
Hemerocallis tlava. M.
Hemerocallis fulva. M.
Herniaria glabra.
Hypericum calycinum. LM.
Hypericum Moserianum. LMH.
Hypericum reptans. I.M.
Iberis.
Iris cristata. MH.
Iris pumila. LM.
Juniperus (all varieties). Leiophyllum buxifolium. M. Lonicera japonica Halliana. LM. Lysimachia Nummularia. MH. Mazus reptans.

Mitchella repens. MH.
Myosotis palustric semperflorens. LMH.
Nepeta Glechoma. LMH.
Nepeta Mussini.
Ophiopogon iaponicum.
Pachysandra terminalis. LMH.
Phlox amoena.
Phlox divaricata. LM.
Phlox subulata (all varieties).
Plumbago Larpentu. LM.
Ranunculus repens. MH.
Rose, Max Graf.
Rosa Wichuraiana.
Sedum (all varieties). LMH.
Sempervi ums.
Shortia galacifolia. M.
Stachys lanata.
Teucrium Chamedrys. L.
Thymus (all varicties).
Tunica Saxifraga.
Veronica Allioni. LM.
Veronica filiformic. L.
Veronica officinalis. MH.
Veronica repens. LM.
Veronica rupestris. LM.
Vinca minor. LMH.
Zanthorhiza apiifolia. LMH.

## Plants for Rock-Gardens

Achillea Ageratum.
Achillea Millefolium roseum.
Achillea Ptarmica, Boule de Neige.
Athionema persicum.
Ajuga genevensis. L.
Ajuga reptans. L.
Alyssum argenteum. L.
Alyssum montanum.
Alyssum saxatile compactum.
Alyssum serpyllifolium.
Anchusa myosotidilora.
Anemone Pulsatilla.
Aquilegia (all varieties).
Arabis alpina.
Arctostaphylos Uva-ursi.
Arenaria (all varieties).
Armeria (all varieties).
Artemisia frigida.
Aster alpinus.
Aster, Mauve Cushion.
Aubrietia deltoides.
Calluna (all varieties).
Campanula carpatica.
Cerastium tomentosum.
Cheiranthus Allioni.
Chrysanthemum arcticum.
Corydalis cheilanthifolia. L.
Cotoneaster (all varieties). L.
Dianthus (all varieties).
Dicentra cximia. L.
Dodecatheon Meadia. L.
Epigæa repens. L.
Epimedium macranthum niveum.
Erica (all varieties).
Erigeron glabellus.
Erinus alpinus.
Eryngium cæruleum.
Eryngium planum.

Euonymus (all varieties). LM.
Euphorbia Myrsinites.
Ferns in variety.
Festuca glauca.
Galium verum.
Gentiana Andrewsi.
Geum, Lady Stratheden.
Geum, Mrs. Bradshaw.
Gypsophila repens.
Hedera Helix (all varieties). L.
Helianthemum (all varieties).
Herniaria glabra.
Heuchera Rosmondi.
Hieracium aurantiacum.
Hypericum reptans.
lberis gibraltarica.
Iberis sempervirens.
Iris cristata. L
lris pumila. L.
Lavandula vera.
Limonium Iatifolium.
Linum alpiman.
Linum perenne.
Liriope spicata.
Lychnis Coronaria.
Lychnis Haageana.
Lysimachia Nummularia. L.
Mazus reptans.
Mertensia virginica. L.
Mitchella repens. L.
Mitella diphylla. L.
Myosotis (all varieties). L.
Nepeta Glechoma. L.
Nepeta Mussini.
Phlox amena.
Phlox divaricata. L.
Phlox subulata (all varieties).
Platycodon grandiflorum. L.

Plumbago Larpenta. L. Polemonium humile.
Primula denticulata cachemiriana.
Primula japonica.
Primula veris. L.
Primula veris, Munstead Strain. L.
Prunclla incisa rosea.
Ranunculus repens. L.
Salvia argentea.
Sanguinaria canadensis. L.
Santolina Chamxeyparissus.
Saponaria ocymoides.
Satureia (Calamintha) alpina.
Sedums (dwarf, all varieties). L
Sempervivum (all varieties).
Silene maritima.
Teucrium Chamedrys.
Thymus (all varieties).
Tiarella cordifolia. L.
Trillium grandiflorum. L.
Trollius europæus. L.
Tunica Saxifraga.
Verbena venosa.
Veronica Allioni.
Veronica Chamadrys. L.
Veronica filiformis.
Veronica gentianoides.
Veronica incana.
Veronica officinalis. L.
Veronica pectinata, L.
Veronica repens.
Veronica rupestris. L.
Veronica spuria, Royal Blue.
Veronica Teucrium.
Veronica Teucrium, True Blue.
Vinca minor. L.
Viola (all varieties).
Yucca glauca.

## Dwarf Evergreens and Shrubs for Rock-Gardens

Azalea (Evergreen).
Berberis verruculosa.
Cotoneaster.
Daphne Cneorum.
Euonymus (all varieties).
Hedera Helix.

Hedera Helix gracilis.
Juniperus chinensis Sargenti.
Juniperus communis depressa.
Juniperus horizontalis Douglasi.
Juniperus procumbens.
Juniperus Sabina (all varieties).

Juniperus squamata.
Lavandula vera.
Leiophyllum buxifolium. Leucothoe Catesbæi.
Pinus montana Mughus.
Taxus cuspiclata brevifolia.

## Binding and Covering Low Banks and Terraces

Many times it is a problem to know the proper treatment of a high or low embankment, perhaps adjacent to the housc or in another conspicuous position.

Such positions can readily be covered with low-growing evergreen plants such as Euonymus radicans colorata, Vinca minor, or other prostrate or semi-prostrate plants; or a combination with prostrate evergreens will be attractive, particularly bccause proper combinations will give rich contrasting foliage effect throughout the entire year.

We advise close planting either for large or small terraces and banks, that the soil be filled quickly with the roots of the plants to prevent washing. Also use Peat Moss in the soil as a mulch. We will gladly suggest planting arrangement and cstimate costs if you will send us brief description of the area to be planted.

## Herbaceous and Dwarf Evergreen Plants

Achillea (all varieties).
Ajuga genevensis.
Ajuga reptans. L.
Arctostaphylos Uva-ursí.
Aster, Mauve Cushion. Calluna.
Clirysanthemum arcticum.
Chrysanthemum maximum. Dianthus (all varieties). Erica.
Ferns (in variety).

Helianthemum.
Hemerocallis.
Hypericum calycinum.
Hypericum reptans. Iberis.
Lavandula vera.
Lespedeza Buergeri.
Lysimachia Nummularia.
Myosotis. L.
Nepeta Glechoma.

Nepeta Mussini.
Pachysandra terminalis.
Phlox subulata.
Plumbago Larpentæ.
Sedum (all varieties).
Veronica Iongifolia.
Veronica repens.
Veronica rupestris.
Veronica spuria, Royal Blue.
Vinca minor.

## Deciduous and Evergreen Plants

Akebia quinata.
Berberis.
Bignonia radicans.
Celastrus scandens.
Cotoneaster (all varieties).
Euonymus (all varieties).
Herlera Helix. L.
Hedera Helix gracilis.

Juniperus chinensis Sargenti.
Juniperus horizontalis Douglasi. Juniperus procumbens.
Juniperus Sabina (aII varieties).
Juniperus squamata.
Leucothoe Catesbri.
Polygonum Auberti.

Rose, Max Graf. Rosa nitida.
Rosa Wichuraiana.
Symphoricarpos Chenaulti.
Symphoricarpos racemosa.
Wisteria sinensis.
Zanthorhiza apiifolia.

## Roadside Planting

The object of roadside planting should be to obtain a natural effect. Therefore, the plants should be in large, irregular masscs-a variation of low carpeting types with medium and high shrubs and trees, working out the natural lay of the land to the best advantage and taking into serious consideration the type of traffic using the road and how the planting will affect their clear vision at eorners.

Best results are obtained by using small, well-rooted plants, closely placed to give proper, quick, and lasting mass and ground-cover effect along our roadsides. Use plants which will bear out the natural atmosphere in the locality and give beauty with naturalistic effect.

## Perennials and Climbers for Roadside Planting

Achillea (all varieties)
Ajugas (Bugle).
Ampelopsis quinquefolia. Asclepias incarnata.
Asclepias tuberosa.
Aster, Mauve Cushion.
Baptisia australis.
Baptisia tinctoria. L.
Bocconia cordata.
Celastrus scandens.
Cephalaria alpina.
Cephalaria tatarica.
Euonymus (all varieties).
Eupatorium.

Ferns.
Hedera Helix.
Hemerocallis.
Hesperis matronalis.
Iris Pseudacorus.
Iris versicolor.
Lespedeza Buergeri.
Liatris pyenostachya.
Lonicera japonica Halliana.
Lysimachia Nummularia. L.
Lythrum Salicaria roseum.
Monarda didyma.
Monarda fistulosa.
Myosotis alpestris. I.

Myosotis palustris. L.
Nepeta Glechoma. L.
Nepeta Mussini.
Pachysandra terminalis. L.
Phlox subulata rosea.
Rose, Max Graf.
Rosa Wichuraiana.
Sedum spectabile. L.
Thymus (aII varieties). Veronica longifolia. Veronica spuria, Royal Blue.
Vinca minor.
Wisteria sinensis.

## Deciduous and Evergreen Trees and Shrubs for Roadside Planting

[^7]Forsythia suspensa.
Hibiscus syriacus.
Juniperus chinensis Pfitzeriana.
Juniperus chinensis Sargenti.
Juniperus communis dcpressa.
Juniperus horizontalis Douglasi.
Juniperus procumbens.
Juniperus Sabina (all varieties).
Juniperus squamata.
Lycium chinense.

Pseudotsuga Douglasi.
Salix Caprea.
Symphoricarpos Chenault
Symphoricarpos racemosa.
Symphoricarpos vuIgaris.
Tamarix africana.
Thuja occidentalis.
Tsuga canadensis. L.
Ulmus pumila.
Zanthorliza apiifolia.

## Woodland Planting

Devcloping and planting a woodland is a most interesting type of gardening, because it is comparatively simple and still allows for full cxcreise of original thought. It also allows one to see, know, and grow many unusual and beautiful plants which require but slight attention if their peculiaritics are noted at the time of planting.

In preparing for woodland planting, a system of winding walks or trails should be laid out. Rocks, old stumps, logs, low mounds of earth, and irregular contours are features which should be retained or introduced. Irregularity of soil-surface modifies the soil-moisture; these irregularities also aid in giving a natural setting and Iimit to the planting of one species.

Where it is necessary to improve the fertility or depth of the soil, Peat Moss or leaf-mold will be found satisfactory for the large majority of plants. The addition of an inch or more of good garden soil to the woodland loam is also recommended.

The cost of replanting with small nursery-grown shrubs and trees is not great and is far more successful than to replant with collected plants. The varieties here listed are ideal subjects for planting along rockstrewn woodland banks, open, uninteresting woodland, along strcans, flanking woodland paths, massing along shady drives and borders of woods. Wc have had much expcrience in the planting and carc of woodland plants and will gladly advise concerning any species more particularly than is practical herc.

## Herbaceous and Evergreen Plants for the Woodland

## In Full Shade

Ajuga genevensis.
Ajuga reptans.
Asarum canadensis.
Convallaria majalis. Cypripedium acaule.
Cypripedium pubescens.
Cypripedium spectabile.
Dicentra Cucullaria.
Epigæa repens.
Eupatoriun coelestinum.
Ferns (all varieties).
Gaultheria procumbens.
Iris Pseudacorus.
Iris versicolor.
Lobelia cardinalis.
Lobelia syphilitica.
Lythrum superbum roseum.
Mertensia virginica.
Mitchella repens.
Pachysandra terminalis.
Polygonatum biflorum.
Sanguinaria canadensis.
Sedum ternatum.
Shortia galacifolia.
Trillium grandiflorum.
Viola pedata.

## In Semi-Shade

Aconitum Fischeri.
Ajuga genevensis.
Ajuga reptans.
Aquilegia canadensis.
Baptisia tinctoria.
Bocconia cordata.
Cimicifuga foetida simplex.
Cimicifuga racemosa.
Corydalis cheilanthifolia.
Cotula squalida.
Dicentra eximia.
Dodecatheon Meadia.
Eupatorium coelestinum.
Eupatorium urticæfolium ( $E$. ageratoides).
Ferns
Dennstædtia (Dicksonia) punctilobla,
Pteridium aquilinum.
Gentiana Andrewsi.
Hesperis matronalis
Iris cristata.
Iris Pseudacorus.

Iris pumila.
Irlis versicolor.
Lysimachia Nummularia.
Lythrum superbum roseum.
Mitella diphylla.
Myosotis alpestris.
Myosot is palustris semperflorens.
Nepeta Glechoma.
Pachysandra terminalis.
Phlox divaricata.
Polemonium reptans.
Primula veris.
Ranunculus repens.
Thalictrum aquilegifolium.
Thalictrum glaucum.
Thalictrum minus adiantifolium.
Tiarella cordifolia.
Trollius europæus.
Veronica officinalis.
Veronica pectinata.
Veronica repens.
Veronica rupestris.
Vinca minor.
Viola pedata.

## Deciduous and Evergreen Trees, Shrubs, and Vines

## In Full Shade

Ampelopsis quinquefolia.
Andromeda (Pieris).
Cornus florida.
Cornus florida rubra.
Daphne Mezereum.
Euonymus radicans.
Euonymus radicans vegetus.
Galax aphylla.
Hedera Helix.
Hedera Helix gracilis.
Kalmia latifolia.
Leucothoe Catesbæi.
Lonicera japonica Halliana.
Rhododendron catawbiense.
Rhododendron maximum.
Tsuga canadernsis.
Zanthorhiza apiifolia.

Hedera Helix gracilis.
Ilex glabra.
Ilex opaca.
Ilex verticillata.
Itea virginica.
Jasminum nudiflorum.
Kalmia latifolia.
Leucothoe Catesbæi.
Lonicera japonica Halliana.
Rhododendron catawbiense.
Rhododendron maximum.
Ribes alpinus.
Symphoricarpos racemosa.
Thuja occidentalis.
Tsuga canadensis.
Zanthorhiza apiifolia.

## Department of Garden Wares

T N THIS branch of our business we carry an extensive line of Garden Potteries, Fountains, Gazing-Globes, and Garden Furniture, Bronze, Lead, Marble, and Composition stone Statuary, Oil-Jars bearing the marks of more than a century of service, yet in prime condition and comparing favorably with more modern designs; white and colored Glazed Animals from Normandy; small Potteries of American and foreign workmanship; and unusual Hand-wrought Iron Ornaments. In addition, we have secured a small but very desirable collection of Antique Furniture, including Bookcases, Bureaus, Clocks, High and Low Chests, Corner Cabinets, Chairs, Tables of every description, and similar articles.
The illustrations here shown are but a hint of the artistic subjects available. You are invited to inspect this comprehensive collection, which is on display at our main office, 1268 Montgomery Avenue, Narberth, Pa. If you are not able to call, we shall be glad to send, on request, a special catalog featuring these various wares.

HUGH B. BARCLAY
1268 MONTGOMERY AVE. NARBERTH, PENNSYLVANIA

[^0]:    On pages 43 to 45 of this Catalog you will find an extensive list of Plants for Special Purposes. This will assist you in selecting Ground-Cover Plants, RockGarden Plants, Woodland Plants, and Trees and Shrubs for Roadside Plantings. The symbols used with certain plants indicate their reaction to light, medium, and heavy shade.

[^1]:    An extensive collection of Broad-leaved Evergreens

[^2]:    Peat Moss should be mixed with garden soil.

[^3]:    Gazing globes, sun dials, bird baths, fountains, and similar pieces always add to the charm of the garden. We have an extensive collection, and invite you to visit our Display Rooms and make your selections.

[^4]:    Pachysandra is the best ground-cover plant for use under shade trees, evergreens, shrubs, and similar places. For full information see pages 4 and 5.

[^5]:    From our Nursery establishment you can secure all the materials needed for a planting plan of any sizetrees, shrubs, vines, perennial plants, Peat Moss, and plant-foods.

[^6]:    Many novel and valuable garden accessories-gaz-ing-globes, sun-dials, fountains, etc.-are carried at our Display Rooms.
